The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an applicable in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidisals and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida albicans agglutinin-like sequence (ALS) protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an applicupe in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candidalbicans agglutinin-like sequence (ALS) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ANPGDIFILIAMPCVFKYTTSQTSVDLTADGVKYATCQFYSGEBFTTFSTLTCTVNDALKS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial celle. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candidalbicans agglutinin-like sequence (ALS) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TLNMPCVFKYTTSQTSVDLTADGVKYATCQFYSGEEFTTFSTLTCTVNDALKSSIKAFGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candidalbicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidates and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is candial abbicans agglutinin-like sequence (ALS) protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Candida
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candialbicans agglutinin-like sequence (ALS) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  :| :: | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | : | | : | : | | : | : | | : | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | :

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Indels

epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida albicans agglutinin-like sequence (ALS) protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          420
                                                                                                                                                                                                                                  Candida
                                                                                                                                             The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candidalbicans agglutinin-like sequence (ALS) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                    :

New monoclonal antibody against Candida albicans agglutinin-like sequence 1 adhesin proteins, for use as a vaccine to treat or prevent disseminated candidiasis, or to generate an immune response that blocks adherence of
                                                                                                                                                                                                                                                                                                                The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS) 1 protein that specifically binds an explicate in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida albicans agglutinin-like sequence (ALS) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

RESULT 10

```
affects the function or activity of a glucan synthase pathway in a Saccharomyces cerevisiae cell which comprises determining if the RNA expression or protein expression in the cell of at least one target polynucleotide sequence is changed relative to the expression of said target polynucleotide sequence is selected from the group consistency of YCLI 13W (SKMI), YNRO6GC, YIR121C (YPS3), YTR209W, YKLIGIC, YFR030W (FLD1) and YFR030W (WETIO). The method is useful for determining whether a molecule affects the function or activity of a glucan synthase pathway in an Scerevisiae cell, possibly allowing development of antifungal agents for use against a variety of pathogens. The present sequence is that of the protein encoded by an S cerevisiae gene which may be used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       84;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          238

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property comprises transformed plant with the

crecombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plants with mere recombinant DNA construct is useful for producing plants with construct is useful for producing plants with mereved plant properties, e.g. improved cold, heat or drought tolerance, colerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth ragulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the grope of the invention. Note: The sequence data for this patent did not form part from USPTO at sequence. html.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The agglutination gene is called FLO1. Saccharomyces cerevisiae includes an agglutination gene of 4.7 kb (FLO1L) and an agglutination gene of 2.6 kb (FLO1S). FLO1L is the intact FLO1 gene on chromosome I, and FLO1S is the FLO1L gene with a portion of the OPF deleted in frame. FLO1L imparts a relatively strong agglutinative property to the host yeast into which it is introduced, while FLO1S imparts a weaker agglutinative property. The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to prowder functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypoptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant baving an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant to having an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polymucleotide or polypeptide is useful for improving plant with the recombinant DNA construct is useful for improved plant properties.

The recombinant DNA construct is useful for improving plants with improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or peats, increased resistance to plant disease, better growth rate by modification of content, improved yield by modified seed oil or protein yield and/or content, improved blant growth and development under at least one stress production, improved lighin production or improved galactomannan content, improved lighin production or improved displant when the production or improved displant when the part or this prepared the production or improved displant when the part of the production. The sequence represents a bacterial polypeptide used in the production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic
                                                                                                                                                                                                      Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pset tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Goldman BS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        format from USPTO at segdata.uspto.gov/sequence.html

(I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP)

expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to produce the TCAP production of them. Additionally, (II) may be used to produce the TCAP also be used as DNA probes in diagnostic polymerase chain reaction (PCR) also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP corpression and activity. Anti-(I) antibodies and antagonists may also be used to down regulate TCAP expression and activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the antibodies may also be used as diagnostic agents for detecting the presence of TCAPPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAIZB460 to AAIZB512 and AAWZ4523 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2024

                                                                                                                                                                                                                                                                                 The present invention describes compounds (1) for the immunotherapy and diagnosis of colon cancer. Also described: (1) a method for detecting the presence of cancer in a patient; (2) a method for stimulating and/or expanding T cells specific for a tumour protein; (3) an isolated T cell population comprising T cells prepared by the method of (2); (4) a method for stimulating an immune response in a patient; (5) a method for treating cancer in a patient; and (6) a method for inhibiting the development of cancer in a patient. (1) have immunostimulant and cytostatic activities and can be used in vaccines. ABZ332646 to ABZ33725 and ABB55343 to ABP55391 represent human colon cancer/tumour related sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     s MJ, Secrist H, Benson DR, Meagher MJ, Stolk JA;

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN
TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT FILING DATE: 1999-02-12
PRIOR FILING DATE: 1999-02-13
PRIOR FILING DATE: 1998-08-13
NUMBER: OF SEQ ID NOS: 28208
SEQ ID NOS: 28208
SEQ ID NO 16702

Sequence 14114, Application US/09248796A

Sequence 14114, Application US/09248796A

Patent No. 6/47137

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBIC

TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

TITLE OF INVENTION: VUMBER: US/09/248,796A

CURRENT APPLICATION NUMBER: US 60/074,725

PRIOR PELING DATE: 1998-02-13

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 14114

LENGTH: 426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ë,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-09-248-796A-14116

Sequence 14116, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

APPLICANT: Ketth Weinstock et al

TITLE OF INVENTION: WUCLEIC ACID AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT PILING DATE: 1999-02-13

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR PILING DATE: 1998-02-13

PRIOR PILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 14116
                                                                                                                                                                                     240
                                                                                                                                                                                                              248
